Your Water - City or Well

Many water supplies, municipal and groundwater, contain iron, hydrogen sulfide, and sediment. These minerals can create problems in water heaters, washing machines, dishwashers, coffee makers, humidifiers, plumbing systems and process equipment.

When Is It Time To Seek Professional Help For Your Water?

- If your tap water doesn't taste good
- If your tap water doesn't smell good
- If your tap water doesn't look good or is not clear
- If your water doesn't lather properly when mixed with soap
- If your water leaves scale or spots on surfaces
- If you've had laboratory testing done and aren't sure how to solve the problems

Water treatment professionals can help you sort through the options because water is complex. There are many potential contaminants and there is no "one size fits all" solution. NWS water conditioners are custom built to fit your particular needs.

Nelsen Corporation is the largest family-owned manufacturer/ distributor of water treatment products in the United States. Headquartered in Medina, Ohio, the company has numerous distribution centers across the country. Since 1954 Nelsen Corporation has remained committed to the professional water treatment dealer, their customers and the communities that they serve. Our Signature Line of water treatment equipment incorporates the very best components from some tremendous U.S. based manufacturers. More than 70 years of experience in water treatment have been incorporated into our Signature Line of systems yielding the very best equipment for your family or business.

Nelsen Water Solutions Whole House Filter Solutions

Water softeners do a great job at getting rid of some heavy metals along with hardness. However, water softening systems are not the best way to remove organic compounds and inorganic materials, including particulates such as sand, rust, and silt. NWS Whole House Filter Solutions reduce these impurities with a fine physical barrier, adsorption, or some other method to help clean water and make it suitable for drinking or other uses.

Sediment Filters

Sediment filters remove particulates as water enters your home. Whole house filtration systems are installed where water enters the home plumbing system and prior to additional water treatment systems. These filters help prevent clogging by reducing the sediment, sand, and rust that enter the treatment system. They also help to reduce the build up inside water heaters, pipes, dishwashers and other appliances and fixtures.

Carbon Filters

Activated carbon is a widely used filtration substance. Activated carbon targets various volatile organic compounds such as benzene, trichloroethylene, and various pesticides and petroleum related compounds. Carbon also aids in eliminating bad taste and odor.

Acid Neutralizer Systems

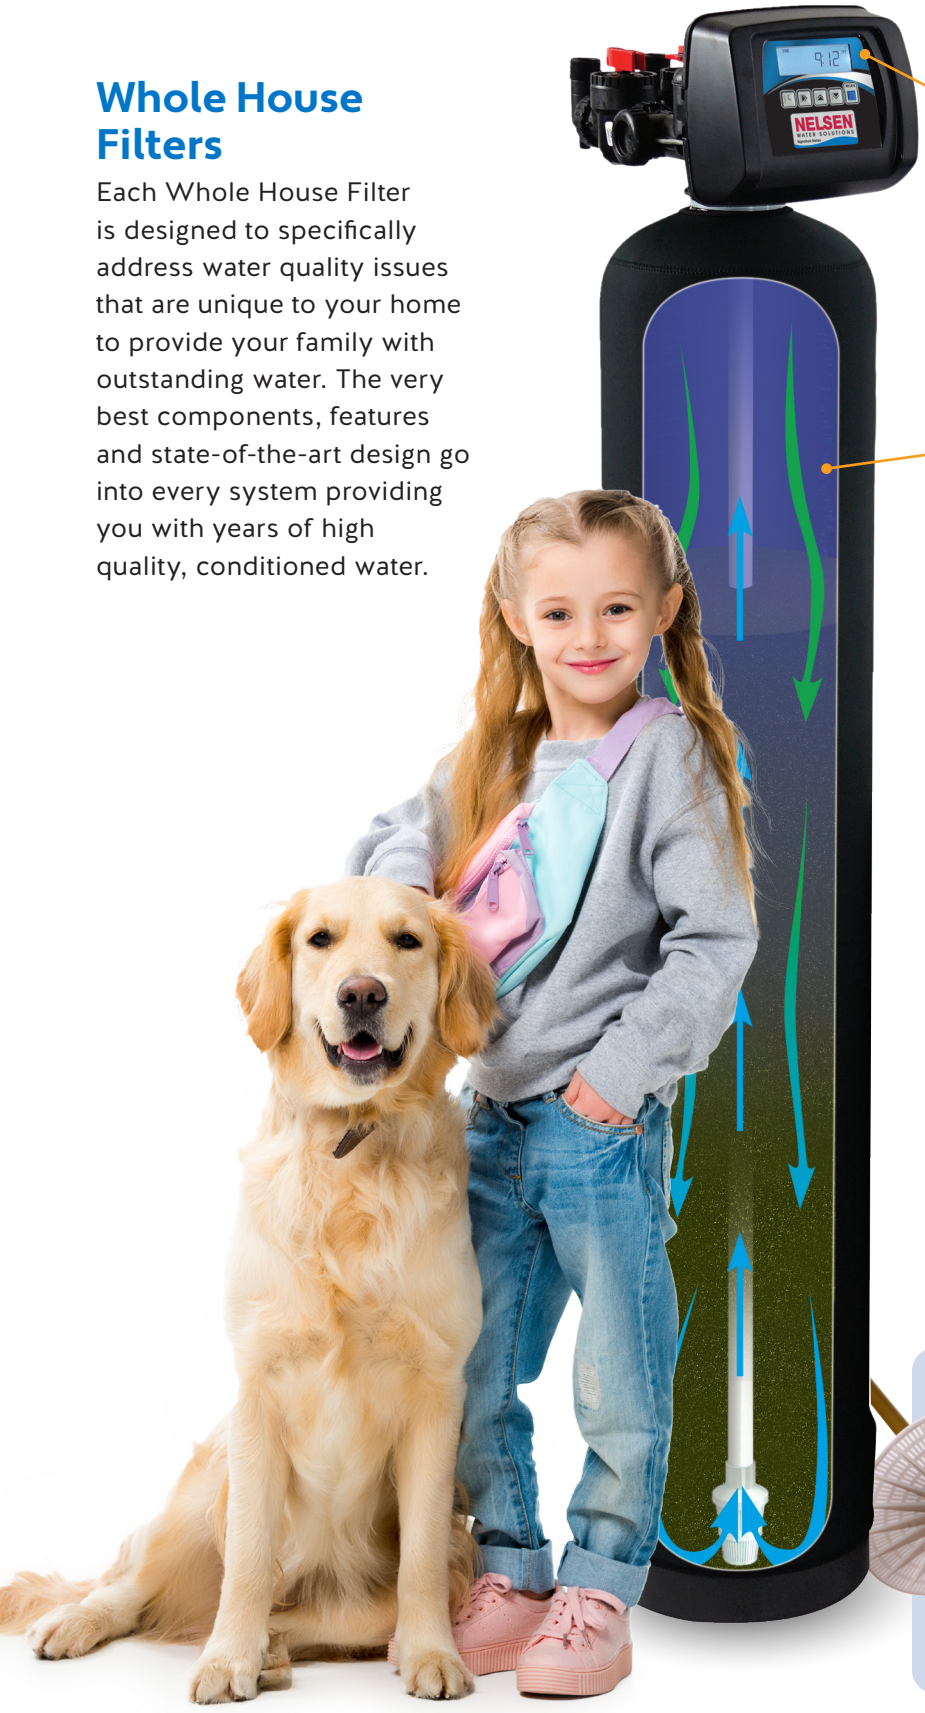

High levels of acid in your water can turn into a serious problem. Although usually not dangerous to consume, high acid content can cause corrosion in copper plumbing. Using a Calcite neutralizer will raise the pH of your water from an acidic nature to a “neutral” pH and get rid of any blue/green staining of fixtures, toilets, sinks, etc.
